

Poverty: 1999

Issued May 2003

Census 2000 Brief

C2KBR-19

By
Alemayehu Bishaw
and
John Iceland

At the close of the 20th century, 12.4 percent of the U.S. population, or 33.9 million people, reported 1999 family incomes that were below the poverty thresholds, down from 13.1 percent in 1989.¹ The incidence of poverty varied considerably across regions, states, counties, and cities, and some groups experienced higher rates of poverty than others.

This report, which exhibits data on the poverty population, is part of a series that presents population and housing data collected by Census 2000.² It describes population distributions for the United States, including characteristics of regions, states, counties, and places with populations of 100,000 or more. A description of how the Census Bureau measures poverty may be found on page 2 and the poverty thresholds used are in Table 1.

Declines in poverty between 1989 and 1999 were regis-

tered for most of the age groups shown in Figure 1 and Table 2. The poverty rate for children (those under 18) declined by 1.7 percentage points, from 18.3 percent in 1989 to 16.6 percent in 1999.

Despite declines, the child poverty rate in 1999 still surpassed rates for adult age groups. In 1999, for example, the poverty rate for people 18 to 64 was 11.1 percent, and the poverty rate for people 65 to 74 and those 75 and over were 8.5 percent and 11.5 percent, respectively. Notably, people 18 to 64 experienced an increase in poverty over the decade.

¹ The estimates in this report are based on responses from a sample of the population. As with all surveys, estimates may vary from the actual values because of sampling variation or other factors. All statements made in this report have undergone statistical testing and are significant at the 90-percent confidence level unless otherwise noted.

² The text of this report discusses data for the United States, including the 50 states and the District of Columbia. Data for the Commonwealth of Puerto Rico are shown in Table 3 and Figure 3.

How poverty is measured.

Poverty statistics presented in census publications use thresholds prescribed for federal agencies by Statistical Policy Directive 14, issued by the Office of Management and Budget (OMB). The original poverty measure was developed in the Social Security Administration during 1963-1964. It was adopted by the Council of Economic Advisors, and the OMB subsequently revised it slightly in 1969 and 1981.

The data on poverty status were derived in part from Census 2000 long form questionnaire items 31 and 32, which provide information on the amount of income people receive from various sources. Poverty status was determined for everyone except those in institutions, military group quarters, or college dormitories, and unrelated individuals under 15 years old.

The current official poverty measure has two components—poverty thresholds (income levels) and the family income that is compared with these thresholds. The official definition uses 48 thresholds that take into account family size (from one person to nine or more) and the presence and number of family members under 18 years old (from no children present to eight or more children present). Furthermore, unrelated individuals and two-person families are differentiated by the age of the reference person (under 65 or 65 and over). The poverty thresholds are not adjusted for regional, state, or local variation in the cost of living. The dollar amounts of the poverty thresholds used in this report are shown in Table 1.

Family income then determines who is poor. If a family's total income is less than the threshold for the family's size and composition, the family and everyone in it

are considered poor. If a person is not living with anyone related by birth, marriage, or adoption, the person's own income is compared with his or her poverty threshold as an "unrelated individual." For example, the 1999 poverty threshold for a 3-person family with one member under age 18 was \$13,410. If the total family income for 1999 was greater than this threshold, then the family and all members of the family were considered to be above the poverty level.

The total number of people below the poverty level is the sum of the number of people in poor families and the number of unrelated individuals with incomes below the poverty threshold. Census 2000 asked people about their income in the previous calendar year. Poverty estimates in this report compare family income in 1999 with the corresponding 1999 poverty thresholds.

Table 1.
Poverty Thresholds (Annual Dollar Amounts) by Size of Family and Number of Related Children Under 18 Years Old: 1999

Size of family unit	Weighted average threshold	Related children under 18 years									
		None	One	Two	Three	Four	Five	Six	Seven	Eight or more	
One person (unrelated individual)	\$8,501										
Under 65 years	8,667	8,667									
65 years and over	7,990	7,990									
Two people	10,869										
Householder under 65 years . .	11,214	11,156	11,483								
Householder 65 years and over	10,075	10,070	11,440								
Three people	13,290	13,032	13,410	13,423							
Four people	17,029	17,184	17,465	16,895	16,954						
Five people	20,127	20,723	21,024	20,380	19,882	19,578					
Six people	22,727	23,835	23,930	23,436	22,964	22,261	21,845				
Seven people	25,912	27,425	27,596	27,006	26,595	25,828	24,934	23,953			
Eight people	28,967	30,673	30,944	30,387	29,899	29,206	28,327	27,412	27,180		
Nine people or more	34,417	36,897	37,076	36,583	36,169	35,489	34,554	33,708	33,499	32,208	

Note: The weighted average thresholds represent a summary of the poverty thresholds for a given family size. They are not used to compute official poverty statistics.

* Total refers to the number of people in the poverty universe (not the total population). For more details, see the text box on how poverty is measured.

Details may not sum to totals because of rounding.

Source: 1990 census and Census 2000 Summary File 3.

GEOGRAPHIC DISTRIBUTION OF POVERTY

Poverty rates varied across regions and states.

Poverty rates varied considerably across regions (see Table 3).³ The lowest poverty rate in 1999 was experienced in the Midwest region (10.2 percent), while the poverty rate was 11.4 percent in the Northeast and 13.0 percent in the West. Poverty rates in 1999 remained highest in the South (13.9 percent). Although 35.6 percent of the total population resided in the South, 40.0 percent of the

population living in poverty resided there, according to Census 2000 (see Figure 2).

The variation across the 50 states and the District of Columbia was even more pronounced (Table 3). Among the 50 states, poverty rates in 1999 ranged from a low of 6.5 percent in New Hampshire to a high of 19.9 percent in Mississippi. The estimated poverty rate for District of Columbia (20.2 percent) is not statistically different from Mississippi.

The three states with the highest poverty rates in 1989 (Mississippi, Louisiana, and New Mexico) all experienced significant declines in poverty over the 1990s, yet remained the three highest.

None of the three states with the lowest poverty rates in 1989 (New Hampshire, Connecticut, and New Jersey) experienced declines in poverty; two of them—Connecticut and New Jersey—experienced increases. Nevertheless, New Hampshire and Connecticut remained among the three states

with the lowest poverty rates in 1999, along with Minnesota.

Clusters of low and high poverty counties were evident in 1999.

Figure 3 shows how poverty rates varied among U.S. counties in 1999. The lighter-shaded counties, such as those that predominate in the Midwest, along the coast in the Northeast, and in some mountain states, had lower-than-average poverty rates. In contrast, the darker-shaded counties in the South and Southwest had higher-than-average poverty rates. High-poverty counties were clustered in Appalachia (such as in West Virginia and Eastern Kentucky), in the Mississippi delta area, along the border in Southwest Texas, and in some American Indian tribal areas in states close to the Canadian border and the Southwest.

Some places had lower poverty rates than others.

Tables 4 and 5 show the places with the lowest and highest poverty rates in 1999 among places with a

³ The Northeast region includes the states of Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont. The Midwest region includes the states of Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin. The South region includes the states of Alabama, Arkansas, Delaware, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, West Virginia, and the District of Columbia, a state equivalent. The West region includes the states of Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming.

population of 100,000 or more.⁴ Naperville, Illinois, had the lowest poverty rate—2.2 percent—among these places (Table 4). Of the 10 places with the lowest poverty rates in Table 4, five were in the West (Gilbert, AZ; Westminster, CO; Thousand Oaks, CA; Arvada, CO; and Peoria, AZ), four were in the Midwest (Naperville, IL; Livonia, MI; Overland Park, KS; and Sterling Heights, MI), one was in the South (Plano, TX), and none were in the Northeast.

Brownsville, Texas, had the highest poverty rate at 36.0 percent. Five of the 10 places listed in Table 5 were

⁴ Census 2000 showed 245 places in the United States with 100,000 or more population. They included 238 incorporated places (including four city-county consolidations) and seven census designated places that were not legally incorporated. For a list of these places by state, see www.census.gov/population/www/cen2000/phc-t6.html.

in the South (Brownsville is accompanied by Laredo, TX; Miami, FL; Athens-Clarke, GA; and New Orleans, LA). Four were in the Northeast (Hartford, CT; Providence, RI; Newark, NJ; and Syracuse, NY), and only one in the West (San Bernardino, CA). None were in the Midwest.

ADDITIONAL FINDINGS ON THE POVERTY POPULATION

Poverty rates varied by race and Hispanic origin.

Census 2000 asked respondents to report one or more races. With the exception of the Two or more races group, all race groups discussed in this report refer to people who indicated only one racial identity among the six major categories: White, Black or African American, American Indian and Alaska Native,

Asian, Native Hawaiian or Other Pacific Islander, and Some other race.⁵ The use of the single-race population in this report does not imply that it is the preferred method of presenting or analyzing data. The Census Bureau uses a variety of approaches.⁶

Non-Hispanic Whites had the lowest poverty rate (8.1 percent) in 1999. The poverty rates for Asians (12.6 percent) and Native Hawaiians or Other Pacific Islanders (17.7 percent) were somewhat higher (see Table 6). Poverty rates were higher still among Blacks or African Americans (24.9 percent) and American Indians and Alaska Natives (25.7 percent). Poverty rates for those who were of Some other race (24.4 percent) or Two or more races (18.2 percent) were also higher than the national average (12.4 percent).⁷

People who were Hispanic or Latino (who may be of any race) also had a high poverty rate (22.6 percent) compared with the national average.⁸

⁵ For further information on each of the six major race groups and the Two or more races population, see reports from the Census 2000 Brief series (C2KBR/01), available on the Census 2000 Web site at www.census.gov/population/www/cen2000/briefs.html.

⁶ This report draws heavily on Summary File 3, a Census 2000 product that can be accessed through *American FactFinder*, available from the Census Bureau's Web site, www.census.gov. Information on people who reported more than one race, such as "White and American Indian and Alaska Native" or "Asian and Black or African American," is forthcoming in Summary File 4, which will also be available through *American FactFinder* later in 2003.

⁷ All the poverty rates for the race groups mentioned above differ statistically from each other except the poverty rates of Native Hawaiians and Other Pacific Islanders and people who reported Two or more races.

⁸ Because Hispanics may be of any race, data in this report for Hispanics overlap with data for racial groups. Based on Census 2000 sample data, the proportion of Hispanics was 8.0 percent for Whites, 1.9 percent for Blacks, 14.6 percent for American Indians and Alaska Natives, 1.0 percent for Asians, 9.5 percent for Pacific Islanders, 97.1 percent for those reporting Some other race, and 31.1 percent for those reporting Two or more races.

Poverty rates varied by family type and number of children.

Between 1989 and 1999, the poverty rate for all families fell from 10.0 percent to 9.2 percent, but poverty rates varied by family type and the presence of children (see Table 7).

The poverty rate for all married-couple families in 1999 (4.9 percent) was lower than the rate for male householder families with no spouse present (13.6 percent) and female householder families with no spouse present (26.5 percent). Among the latter group, the

poverty rate for families with related children under 18 was higher still, at 34.3 percent in 1999, although this figure represented a decline from 42.3 percent in 1989.

ABOUT CENSUS 2000

Uses of poverty statistics

The U.S. Census Bureau's statistics on poverty provide an important measure of the country's economic well-being and are sometimes used nonstatistically to assess the need or eligibility for various types of public assistance. Funds for food, health care, and legal services are distributed to local agencies based on data about elderly people with low incomes. Data about poor children are used to apportion Title I funds to counties and school districts. Under the Low-Income Home Energy Assistance Program, income and poverty data are used to allocate funds for home energy aid among areas. Other statutory applications include the Head Start Act, the Child Welfare and Services Program, the Vocational and Applied Technology Act, and the Public Housing/Section 8 Certificate and Housing Voucher Allocation Programs.

Accuracy of the Estimates

The data contained in this report are based on the sample of households who responded to the Census 2000 long form. Nationally, approximately 1 out of every 6 housing units was included in this sample. As a result, the sample estimates may differ somewhat from the 100-percent figures that would have been obtained if all housing units, people within those housing units, and people living in group quarters had been enumerated using the same questionnaires, instructions, enumerators, and so forth. The sample estimates also differ from the

values that would have been obtained from different samples of housing units, people within those housing units, and people living in group quarters. The deviation of a sample estimate from the average of all possible samples is called the sampling error.

In addition to the variability that arises from the sampling procedures, both sample data and 100-percent data are subject to nonsampling error. Nonsampling error may be introduced during any of the various complex operations used to collect and process data. Such errors may include: not enumerating every household or every person in the population, failing to obtain all required information from the respondents, obtaining incorrect or inconsistent information, and recording information incorrectly. In addition, errors can occur during the field review of the enumerators' work, during clerical handling of the census questionnaires or during the electronic processing of the questionnaires.

Nonsampling error may affect the data in two ways: (1) errors that are introduced randomly will increase the variability of the data and, therefore, should be reflected in the standard errors; and (2) errors that tend to be consistent in one direction will bias both sample and 100-percent data in that direction. For example, if respondents consistently tend to under report their incomes, then the resulting estimates of households or families by income category will tend to be understated for the higher income categories and overstated for the lower income categories. Such biases are not reflected in the standard errors.

While it is impossible to completely eliminate error from an operation as large and complex as the decen-

nial census, the Census Bureau attempts to control the sources of such error during the data collection and processing operations. The primary sources of error and the programs instituted to control error in Census 2000 are described in detail in Summary File 3 Technical Documentation under Chapter 8, "Accuracy of the Data," located at www.census.gov/prod/cen2000/doc/sf3.pdf.

All statements in this Census 2000 Brief have undergone statistical testing, and all comparisons are significant at the 90-percent confidence level, unless otherwise noted. The estimates in tables maps, and other figures may vary from actual values due to sampling and nonsampling errors. As a result, estimates in one category may not be significantly different from estimates assigned to a different category. Further information on the accuracy of the data is located at www.census.gov/prod/cen2000/doc/sf3.pdf. For further information on the computation

and use of standard errors, contact the Decennial Statistical Studies Division at 301-763-4242.

For More Information

The Census 2000 Summary File 3 data are available from the *American Factfinder* on the Internet (factfinder.census.gov). They were released on a state-by-state basis during 2002. For information on confidentiality protection, nonsampling error, sampling error, and definitions, also see www.census.gov/prod/cen2000/doc/sf3.pdf, or contact the Customer Services Center at 301-763-INFO (4636).

Information on population and housing topics is presented in the Census 2000 Brief series, located on the Census Bureau's Web site at www.census.gov/population/www/cen2000/briefs.html. This series, which will be completed in 2003, presents information on race, Hispanic origin, age, sex, household type, housing tenure, and social, economic, and housing
